CAUTION

SHORT CIRCUIT THE ANODE OF THE PICTURE TUBE AND THE ANODE CAP TO THE METAL CHASSIS, CRT SHIELD, OR THE CARBON PAINTED ON THE CRT, AFTER REMOVAL OF THE ANODE CAP.

WARNING !!

AN ISOLATION TRANSFORMER SHOULD BE USED DURING ANY SERVICE WORK TO AVOID POSSIBLE SHOCK HAZARD DUE TO LIVE CHASSIS, THE CHASSIS OF THIS RECEIVER IS DIRECTLY CONNECTED TO THE POWER LINE.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARKED & ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL FOR SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

APRES AVOIR DECONNECTE LE CAP DE'LANODE, COURT-CIRCUITER L'ANODE DU TUBE CATHODIQUE ET CELUI DE L'ANODE DU CAP AU CHASSIS METALLIQUE DE L'APPAREIL, OU AU COUCHE DE CARBONE PEINTE SUR LE TUBE CATHODIQUE OU AU BLINDAGE DU TUBE CATHODIQUE.

ATTENTION !!

AFIN D'EVITER TOUT RISQUE D'ELECTROCUTION PROVENANT D'UN CHÁSSIS SOUS TENTION, UN TRANSFORMATEUR D'ISOLEMENT DOIT ETRE UTILISÈ LORS DE TOUT DÈPANNAGE LE CHÁSSIS DE CE RÈCEPTEUR EST DIRECTMENT RACCORDÈ Á L'ALIMENTATION SECTEUR.

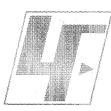

ATTENTION AUX COMPOSANTS RELATIFS Á LA SECURITÈ!!

LES COMPOSANTS IDENTIFIÈS PAR UNE TRAME ET PAR UNE MARQUE & SUR LES SCHÈMAS DE PRINCIPE, LES VUES EXPLOSÈES ET LES LISTES DE PIECES SONT D'UNE IMPORTANCE CRITIQUE POUR LA SÈCURITÈ DU FONCTIONNEMENT, NE LES REMPLACER QUE PAR DES COMPSANTS SONY DONT LE NUMÈRO DE PIÈCE EST INDIQUÈ DANS LE PRÈSENT MANUEL OU DANS DES SUPPLÈMENTS PUBLIÈS PAR SONY.

CAUTION

Lead Free Soldered Boards

The circuit boards listed below [Table 1] used in these models may have been processed using Lead Free Solder. The boards are identified by the LF logo located close to the board designation e.g. F1, H1 etc [see examples]. The servicing of these boards requires special precautions to be taken as outlined below.

example 2

example 1

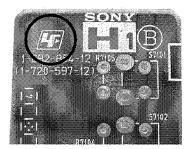

Table 1

Board	Function
А	Audio,Deflection,Tuner,Regulators, Interface
В	Backend,Scanrate,LVDS,A_Interface
С	R,G,B Out
D	Deflection
D2	Smart Mode Deflection
F1	Power Switch/Fuse/SIRCS/Standby LED
G	Power Supply
H5	Front AV Input/Headphone and Control Switches
J	AV Scart I/O Switching and Sockets
VM	Velocity Modulation

It is strongly recommended to use Lead Free Solder material in order to guarantee optimal quality of new solder joints. Lead Free Solder is available under the following part numbers:

Partnumber	Diameter	Remarks
7-640-005-19	0.3mm	0.25Kg
7-640-005-20	0.4mm	0.50Kg
7-640-005-21	0.5mm	0.50Kg
7-640-005-22	0.6mm	0.25Kg
7-640-005-23	0.8mm	1.00Kg
7-640-005-24	1.0mm	1.00Kg
7-640-005-25	1.2mm	1.00Kg
7-640-005-26	1.6mm	1.00Kg

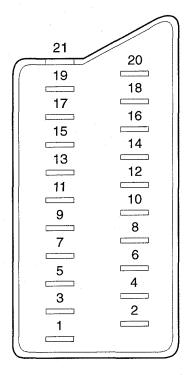

Due to the higher melting point of Lead Free Solder the soldering iron tip temperature needs to be set to 370 degrees centigrade. This requires soldering equipment capable of accurate temperature control coupled with a good heat recovery characteristics.

For more information on the use of Lead Free Solder, please refer to http://www.sony-training.com

AE-6BA SELF DIAGNOSTIC SOFTWARE

The identification of errors within the AE-6BA chassis is triggered in one of two ways: - 1: Busy or 2: Device failure to respond to IIC. In the event of one of these situations arising the software will first try to release the bus if busy (Failure to do so will report with a continuous flashing LED) and then communicate with each device in turn to establish if a device is faulty. If a device is found to be faulty the relevant device number will be displayed through the LED (Series of flashes which must be counted) See table 1, non fatal errors are reported using this method. Each time the software detects an error it is stored within the NVM. See Table 2.

Table 1

Switching on the TV and Automatically Tuning

The first time you switch on your TV, a sequence of menu screens appear on the TV enabling you to: 1) choose the language of the menu screen 2) Choose the country in which you are going to operate the TV, 3) adjust the picture slant, 4) check how to connect optional equipment to your TV. 5) search and store all available channels (TV Broadcast) and 6) change the order in which channels (TV Broadcast) appear on the screen. However, if you need to change any of these settings at a later date, you can do that by selecting the appropriate option in the (Set Up menu) or by pressing the Auto Start Up button EEI on the TV set.

-7-

Connect the TV plug to the mains socket (220-240V AC, 50Hz.) The first time that the TV set is connected, it is usually turned on. If the TV is off, press the **0** on/off button on the TV set to turn on the TV.

The first time you switch on the TV, a **Language** menu displays automatically on the TV screen.

Press the \spadesuit , Ψ , \spadesuit or \spadesuit buttons on the remote control to select your language, then press the OK button to confirm your selection. From now on all the menus will appear in your chosen language.

If the country in which you want to use the TV set does not appear in the list, select "off" instead of a country.

• To avoid wrong tolerext characters for cyrillic languages we recommend selecting Russi country if your own country does not appear in the list.

Because of the earth's magnetism, the picture might slant. The Picture Rotation menu allows you to correct the picture slant, if it is necessary. a) If it is not necessary, press OK to select Not necessary.
b) If it is necessary, press ← or ← to select Adjust now, then press OK and correct any slant of the pricture between -5 and +5 by pressing ← or ←. Finally, press OK to store.

4

5 A diagram will appear showing you how to connect a wide range of equipment to your TV set. Follow the instructions and finally press the OK button to remove the picture and continue the

After the automatic tuning process has finished and the optional equipment has been connected at this stage, we recomment you follow the instructions explained on the section "Connection duide" on page 15 to get the optimus settings related with the optional equipment.

6 The Auto Tuning menu button to select Yes.

ВB

7 The TV starts to automatically search and store all available broadcast channels for you.

This procedure could take some minutes. Please be and do not press any buttons, otherwise automatic t will not be completed.

 \odot

 \leq

SECTION 1 GENERAL

If no channels were found during the auto tune process, a message appears automatically on the screen asking you to connect the aerial. Check the aerial connection (refer to page 7). Press the OK button to restart the auto tuning

After all available channels are captured and stored, the Programme Sorting menu automatically appears the Programme Sorting menu avoinnes the order in

Troubleshooting

B. Here are some simple solutions to

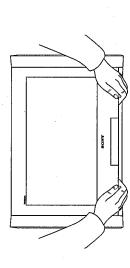

Solution	 vo picture (screen is dark) and no • Check the aerial connection. • Plug the TV in and press the Ø button on the front of the TV. • If the standby indicator ♥ is on, press TV I/♥ button on the remote control.
Problem	No picture (s

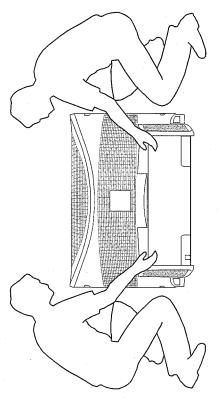

Poor or no picture (screen is dark), but good sound.	Poor or no picture (screen is dark), but • Using the menu system, select the "Picture Adjustment" menu and select good sound. "Reset" to return to the factory settings (see page 11).
No picture or no menu information from equipment connected to the Seart connector.	 Check that the optional equipment is on and press the
Good picture, no sound.	Press the ∠ + button on the remote control. Check that "TV Speakers" is "On" in the "Sound Adjustment" menu (see page 13). Check that headphones are not connected.
No colour on colour programmes.	• Using the menu system, select the "Picture Adjustment" menu and select "Reset" to return to factory settings (see page 11).
When you switch on the TV the last channel you were watching before switching the TV off does not appear.	• This is not a malfunction. Press the number buttons on the remote control to select the desired channel.

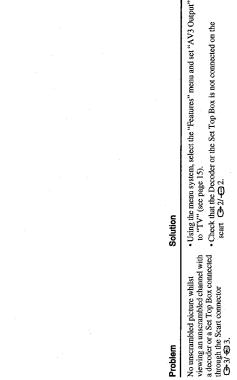

Distorted picture when changing programmes or selecting teletext.	\bullet Turn off any equipment connected to the Scart connector on the rear of the TV
Wrong characters appear when viewing teletext.	Use the menu system to enter the "Country" menu (see page 16) and select the country in which you operate the TV set. For cyrillic languages, we recommend selecting Russia country if your own country does not appear in the list.
Wrong characters appear when viewing NexTView.	• Use the menu system to enter the "Language" menu (see page 16) and select the same language that NexTVFew is broadcast in.
Picture slanted.	• Using the menu system, select the "Picture Rotation" option in the "Features" menu to correct the picture slant (see page 15).
Snowy picture when viewing a TV channel.	• Using the menu system, select the "Manual Programme Preset" menu and adjust Fine Tuning (AFT) to obtain better picture reception (see page 18). • Using the menu system, select the "Noise Reduction" option in the "Picture Adjustment" menu and select "Auto" to reduce the noise in the picture

- 12 -

Lifting the TV Set

PAP navigation is only possible in TV mode, please check that Media Selector is set to TV.

Check that the Media Selector on the remote control is set to the device you are using (VCR, TV, DVD or AUX).
 If the remote control does not operate the VCR or DVD even when the Media Selector has been set correctly. Enter the necessary code set as explained on page 30.
 Replace the batteries.

GB

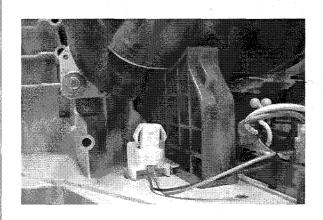

If you continue to experience problems, have your TV serviced by Never open the casing yourself.

SECTION 2 DISASSEMBLY

2-1. Rear Cover Removal

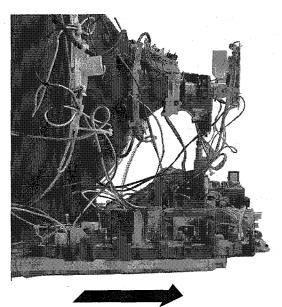

Remove the rear cover fixing screws indicated and pull the rear cover backwards away from the set. Take care when removing the rear cover not to damage the speaker cable [Disconnect the speaker connector] a speaker is fitted inside the rear cover.

2-2. Speaker Connector Disconnection

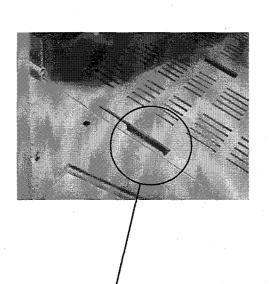

Before completely removing the rear cover disconnect the speaker connector which is located on the inside of the set.

2-3. Chassis Removal and Refitting

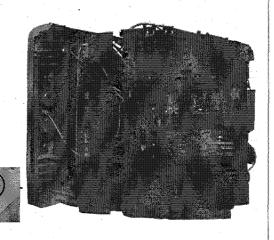

To remove lift the main bracket rear slightly and slide the chassis away from the beznet. Ensure that the interconnecting leads are released from their purse locks to prevent damage being caused.

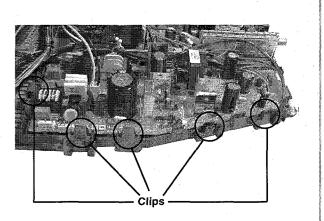

When refitting the chassis ensure that the main bracket is located in the beznet guide slots before sliding the chassis forwards. Refit the inter-connecting leads in their respective purse locks.

2-4. Service Position

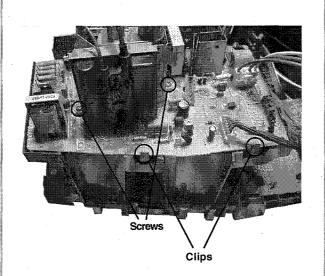

To place the chassis in the service position, insert the main bracket firmly into the T-slot located on the left corner of the beznet as indicated (see inset). To gain access to the underside of the boards follow the instructions on page 16. [Removal and Replacement of the main bracket bottom plates].

2-5. G Board Removal

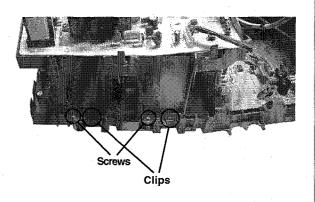

To remove the G Board remove the two screws from the middle of the board, release the clips circled and ease the board gently away from the support bracket.

2-6. D2 Board Removal

To remove the D2 board remove the two screws circled, release the clips circled and ease the board gently away from the support bracket.

2-7. D Board Removal

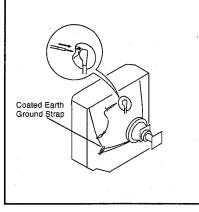

To remove the D board first remove the D2 bracket by removing the two screws circled and releasing the four clips (two on each side of the bracket). The D board can then be removed using the same method as the G board but with the necessity to remove only one screw from the middle of the D board.

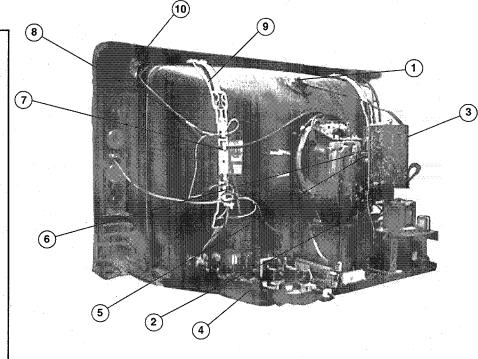

2-8. Picture Tube Removal

WARNING: BEFORE REMOVING THE ANODE CAP

High voltage remains in the CRT even after the power is disconnected. To avoid electric shock, discharge CRT before attempting to remove the anode cap. Short between anode and CRT coated earth ground strap.

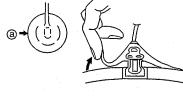

Y-100

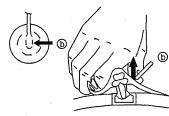

- 1. Discharge the anode of the CRT and remove the anode cap.
- 2. Unplug all interconnecting leads from the Deflection yoke, neck assy, degaussing coils and CRT grounding strap.
- 3. Remove the C Board from the CRT.
- 4. Remove the chassis assembly.
- 5. Loosen the Neck assembly fixing screw and remove.
- 6. Loosen the Deflection yoke fixing screw and remove.
- 7. Place the set with the CRT face down on a cushion and remove the Degaussing Coil holders.
- 8. Remove the Degaussing Coils.
- 9. Remove the CRT grounding strap and spring tensioners.
- 10. Unscrew the four CRT fixing screws [located on each CRT corner] and remove the CRT.
 - [Take care not to handle the CRT by the neck.]

Removal of the Anode-Cap

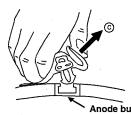

REMOVAL PROCEDURE.

(1) Turn up one side of the rubber cap in the direction indicated by the arrow (a)

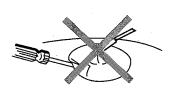

2 Using a thumb pull up the rubber cap 3 When one side of the rubber cap is firmly in the direction indicated by the arrow (b)

separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling it up in the direction of the arrow (c)

How to handle the Anode-Cap

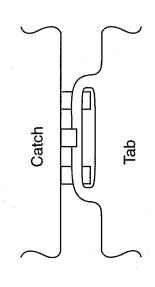

- To prevent damaging the surface of the anode-cap do not use sharp materials.
- 2. Do not apply too great a pressure on the rubber, as this may cause damage to the anode connector.
- A metal fitting called a shatter hook terminal is fitted inside the rubber cap.
- 4. Do not turn the rubber foot over excessively, this may cause damage if the shatter hook sticks out.

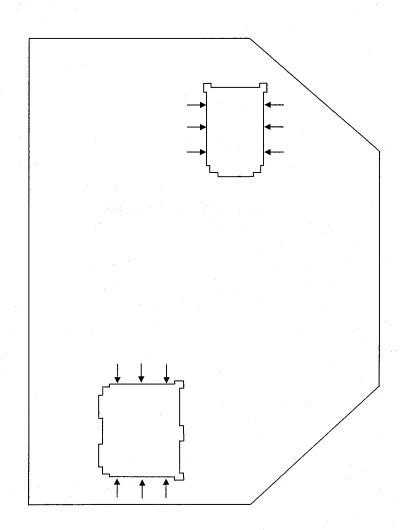

to the solder side of the printed wiring boards, the oracket require to be removed. This is performed by r at the locations indicated by the arrows.

For safety reasons, on no account should the plates be removed and not refitted after servicing.

Please note that the p tabs to be fitted into t

SECTION 3 SET-UP ADJUSTMENTS

- When complete readjustment is necessary or a new picture tube is installed, carry out the following adjustments.
- Unless there are specific instructions to the contrary, carry out these adjustments with the rated power supply.
- Unless there are specific instructions to the contrary, set the controls and switches to the following settings:

Contrast		. normal
Brightness	3	. normal

Carry out the adjustments in the following order:

- 3-1. Beam Landing.
- 3-2. Convergence.
- 3-3. Focus.3-4. White Balance.

Note: Test equipment required.

- 1. Color bar/pattern generator.
- Degausser.
- Oscilloscope.
- 4. Digital multimeter.

3-1. Beam Landing

Preparation:

- 1. In order to reduce the influence of geomagnetism on the set's picture tube, face it in an easterly or westerly direction.
- 2. Switch on the TV set's power and degauss with a degausser.

(1) Adjustment of Correction Magnet for Y-Splitting Axis.

- 1. Input a crosshatch signal from the pattern generator.
- 2. Set the Picture control to minimum and confirm that the Brightness control is set to normal.
- 3. Position the neck assembly as indicated in Fig.3-2.
- 4. Loosen the deflection yoke fixing screw.
- 5. Move the deflection yoke as far forward as is possible.
- 6. Adjust the upper and lower pin symmetrically by opening or closing the Y-splitting axis correction magnets located on the neck assembly. [See Fig 3-3]
- 7. Return the deflection yoke to its original position and re-tighten its fixing screw.

Fig.3-1

Y-splitting axis correction magnet

Caution:

High voltages are present on the Deflection yoke terminals - take care when handling the Deflection yoke whilst carrying out adjustments.

(2) Landing

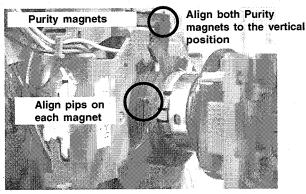

Note: Before carrying out the following adjustments adjust the magnets as indicated [See Fig. 3-4].

- 1. Input a crosshatch signal from the signal generator.
- 2. Rough-adjust the focus and horizontal convergence.
- 3. Switch from the crosshatch pattern to an all-red pattern.
- 4. Move the deflection yoke backwards and adjust with the purity magnet so that the red is at the centre and it aligns symmetrically [See Fig. 3-5].
- 5. Move the deflection yoke forward to the point where the entire screen just becomes red [Mark its position].
- 6. Move the deflection yoke further forward until the screen just changes colour at the edges. [Mark its position]
- Position the deflection yoke between the two marks indicated above.
- 8. Input a crosshatch pattern from the pattern generator and rotate the deflection yoke so that the horizontal lines are parallel with the top and bottom of the screen.
- 9. When the position of the deflection yoke has been determined, fasten it with its fixing screw.
- 10. Switch the pattern generator to green then blue and confirm the purity.
- 11. If the beam does not land correctly in all the corners of the screen, use disk magnets to correct it. [Confirm the corner landing for green and blue]

Align the edge of the neck assy with the edge of the G2 grid on the G3 side.

Fig.3-3

Fig.3-4

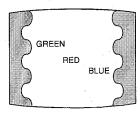

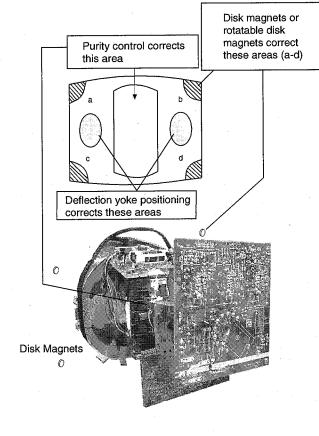

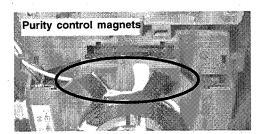

Fig.3-5

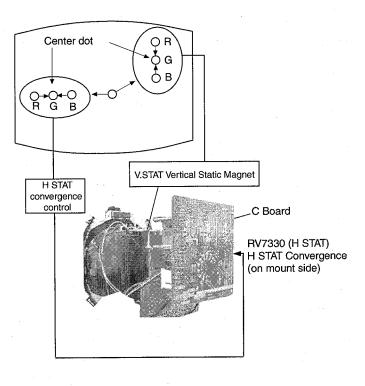

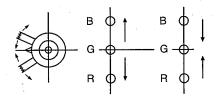

3-2. Convergence

(1) Screen centre convergence [Static convergence]

- 1. Input a dot pattern signal from the pattern generator.
- 2. Normalize the picture setting.
- 3. [Moving vertically], adjust the V.STAT magnet so that the vertical red, green and blue dots coincide at the centre of the screen.

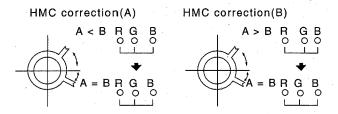

By opening or closing the V.STAT magnet, the red green and blue dots move in the direction indicated below.

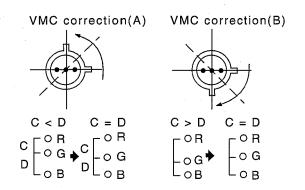

Do not adjust the H.STAT by rotating the V.STAT magnets as this can affect the focus setting.

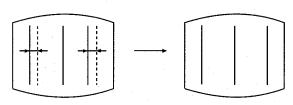

- Correction for HMC [Horizontal mis-convergence] and VMC [Vertical mis-convergence] by using the BMC [Hexapole] magnet.
- a). HMC correction by BMC [Hexapole] magnet and movement of the electron beam.

 b). VMC correction by BMC [Hexapole] magnet and movement of the electron beam.

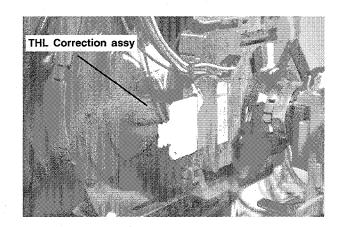

HAMP Adjustment

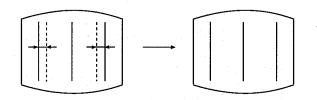

Adjust the HAMP using HAMPL and HAMPR registers in the Dynamic Convergence section of the service menu.

HTIL Adjustment

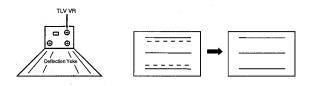

HTIL correction can be performed by adding a THL correction assembly to the Deflection yoke.

YCH Adjustment

TLV Adjustment

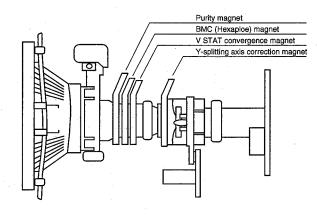

H-TRAP Adjustment

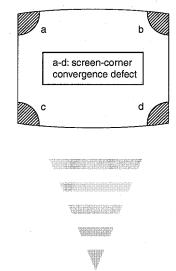

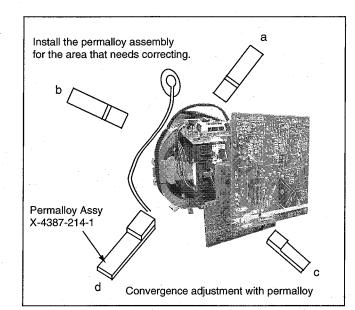

The H-TRAP should not be adjusted unless absolutely necessary as it affects the TLV settings.

Layout of each control

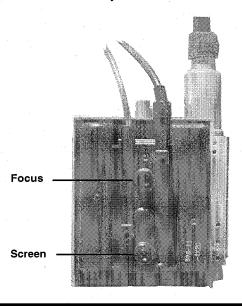

Note: If you are unable to adjust the corner convergence properly, this can be corrected with the use of permalloy magnets.

3-3. Focus Adjustment

- 1. Receive a television broadcast signal.
- 2. Normalize the picture setting.
- Adjust the focus control located on the flyback transformer to obtain the best focus at the centre of the screen.
 Bring only the centre area of the screen into focus, the magentaring appears on the screen. In this case, adjust the focus to optimize the screen uniformly.

3-4. Screen (G2), White Balance

[Adjustment in the service mode using the remote commander]

G2 adjustment

- 1. Input a dot signal from the pattern generator.
- . Set the Picture, Brightness and Colour to minimum.
- Apply 175V DC from an external power supply to the R, G and B cathodes of the CRT.
- Whilst watching the picture, adjust the G2 control [SCREEN] located on the flyback transformer to the point just before the flyback return lines disappear.

White balance adjustment for TV mode

- 1. Input an all-white signal from the pattern generator.
- 2. Program the Remote Commander for operation in Service Mode. [See Page 21].
- 3. Enter into the 'Service Mode' by pressing 'AUX/VIDEO' button twice and 'MENU' on the Service Commander.
- 4. Select 'Service' from the on screen menu display and press 'Right Arrow'.
- 5. The 'Service' menu will appear on the screen. [See Page 21]
- 6. Select 'Picture' from the on screen menu and press right arrow.
- 7. Select 'Picture settings' from the on screen menu and press right arrow and set the 'Contrast_Max' to MAX.
- Select 'White Balance' from the on screen menu and press right arrow.
- 9. The 'White Balance' menu will appear on the screen.
- 10. Set the 'Normal_PAL_RD' to 465.
- 11. Adjust the 'Normal_PAL_GD' and the 'Normal_PAL_BD' so that the white balance becomes optimum.
- 12. Select 'Picture settings' from the on screen menu and press right arrow and set the 'Contrast_Min' to MIN.
- 13. Set the 'Normal_PAL_RC' to 121.
- 14. Adjust the 'Normal_PAL_GC' and the 'Normal_PAL_BC' with the left and right buttons on the commander so that the white balance becomes optimum.
- 15. Press the 'OK' button to write the data for each item.

- 20

SECTION 4 CIRCUIT ADJUSTMENTS

4-1. Electrical Adjustments

Service adjustments to this model can be performed using the supplied remote Commander RM-942.

Programming the Remote Commander for Operation in Service Mode

- 1. Press and hold the left Mode Select button until the VCR and DVD LED's flash.
- 2. Press 99999. The TV LED should light. The remote commander is now set to Service Mode.

3. To return the remote commander to normal operation mode repeat step 1. then press 00000. The TV LED should light. The remote commander is now set to normal mode.

Setting the TV into Service Mode

- 1. Program the remote commander for operation in Service Mode as described above.
- 2. Turn on the TV main power switch.
- Press the 'aux/video' standby button on the remote commander twice.
 'TT__' will appear in the upper right corner of the screen.
- Other status information will also be displayed.

4.	Press 'MENU' on the remote commander to obtain the
	following menu on the screen.

Service Main Menu:AE6BA/Y (v0.2	6D) NVM_VERSION:04H
Service	•
Design	
Error	
	• • • • • • • • • • • • • • • • • • • •
Select: ▲ ▼ Select Item: ► F	ACTORY INFO:FFH FFH 03H

- Move to the corresponding adjustment item using the up or down arrow buttons on the Remote Commander.
- 6. Press the right arrow button to enter into the required menu item.
- 7. Press the 'aux/video' button on the Remote Commander to quit the Service Mode when all adjustments have been completed.

Note:

 After carrying out the service adjustments, to prevent the customer accessing the 'Service Menu' switch the TV set OFF and then ON.

Sub Brightness Adjustment

- 1. Input a Monoscope pattern.
- 2. Program the Remote Commander for operation in Service Mode. [See Page 21].
- 3. Press 'AUX/VIDEO' 'AUX/VIDEO' 13 on the Remote Commander.
- 4. Adjust the 'Sub-Brightness' data so that there is barely a difference between the 0 IRE and 10 IRE signal levels.

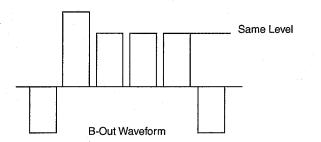

Sub Contrast Adjustment

- 1. Input a video signal that contains a small 100% white area on a black background.
- 2. Connect an oscilloscope to Pin 10 of J7330 [C Board].
- 3. Program the Remote Commander for operation in Service Mode. [See Page 21].
- 4. Adjust the Sub-Contrast [Using 'AUX/VIDEO' 'AUX/VIDEO' '11'] to obtain a voltage of 114 +0/- 5V.

- 22 -

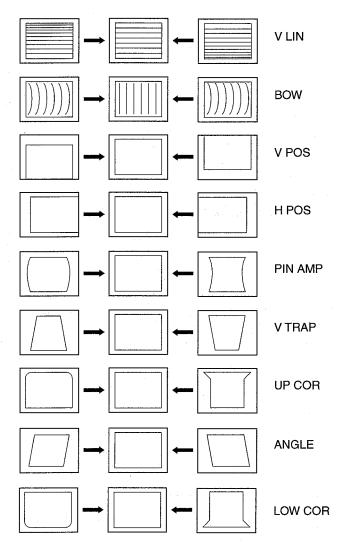

Sub Colour Adjustment

- 1. Receive a PAL colour bar signal.
- 2. Connect an oscilloscope to Pin 5 of CN7331 [C Board].
- 3. Program the Remote Commander for operation in Service Mode. [See Page 21].
- Adjust the 'Sub Colour'
 [Using 'AUX/VIDEO' 'AUX/VIDEO' '12'] so that the Cyan,
 Magenta and Blue colour bars are of equal levels as indicated
 below.

Deflection System Adjustment

- Program the Remote Commander for operation in Service Mode.
 [See Page 21] and enter into the 'Geometry' service menu,
 Wide mode adjustment.
- 2. Select and adjust each item in order to obtain the optimum image.

4-2.TEST MODE 2:

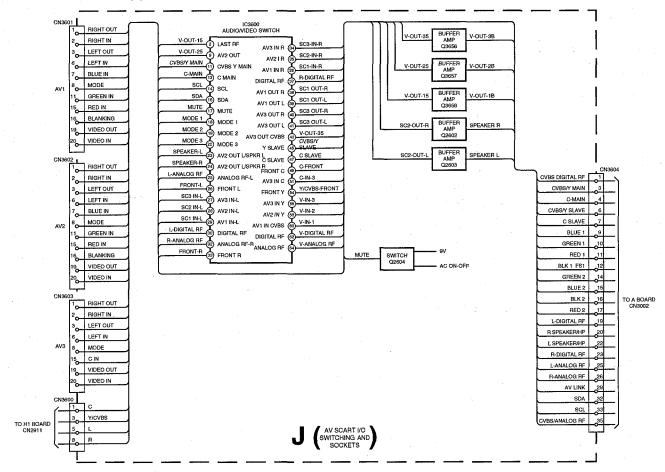

Test Mode 2 is available by programming the Remote Commander for operation in Service Mode [As shown on Page 21] then pressing the 'AUX/VIDEO' button twice, OSD 'TT' appears. The functions described below are available by selecting the two numbers. To release 'Test mode 2', press 00, or switch the TV set into Stand-by mode.

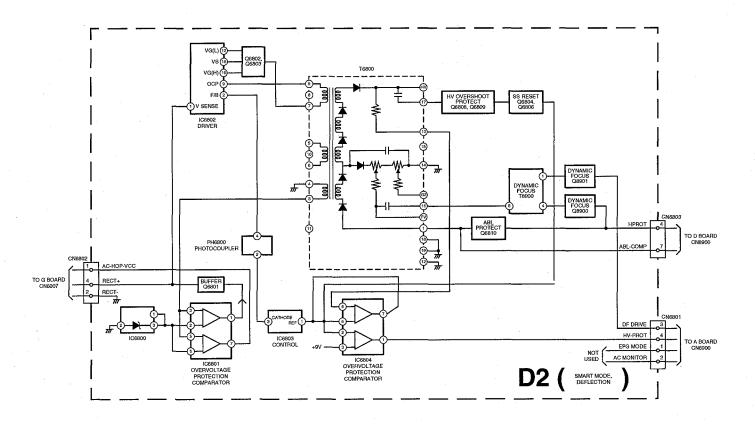

00	'TT' mode off
01	Set picture level to maximum
02	Set picture level to minimum
03	Set speaker/headphone Volume to 35%
04	Set speaker/headphone Volume to 50%
05	Set speaker/headphone Volume to 65%
06	Set speaker/headphone Volume to 80%
07	Ageing mode on

Note:
Portions of the circuit contained within the marked areas as shown have high voltages present. Use care to prevent electric shock during inspection or repair. An Isolation Transformer must be used during any Service work to avoid possible shock hazard due to live chassis. The chassis of this receiver is directly connected to the power line.

SECTION 6 EXPLODED VIEWS

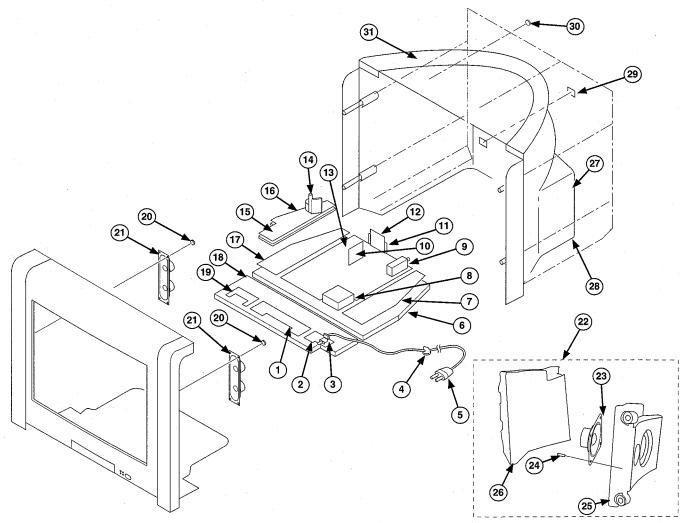

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remarks column.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

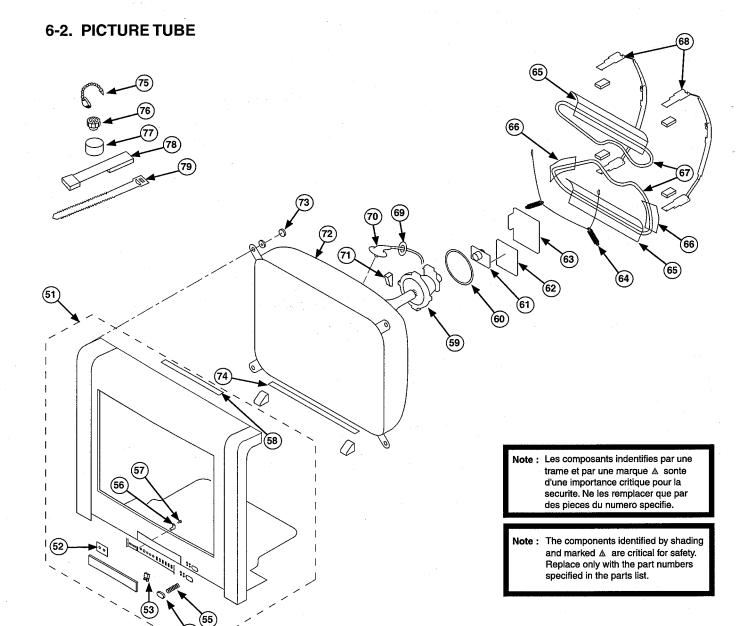

Note: Les composants indentifies par une trame et par une marque ∆ sonte d'une importance critique pour la securite. Ne les remplacer que par des pieces du numero specifie.

Note: The components identified by shading and marked ∆ are critical for safety. Replace only with the part numbers specified in the parts list.

DESCRIPTION

REMARK

A new TV Repair Assistance Tool that combines ease of use and powerful PC software tools to allow you to save valuable time during many TV repairs.

The TRACE interface connects to the PC's serial port. It provides connection to the TV's I2C bus and can be provided with an InfraRed transmitter (optional).

The interface is powered by a standard 9 V PP3 battery for portable use, and can also be powered by an external 9V/25mA DC power

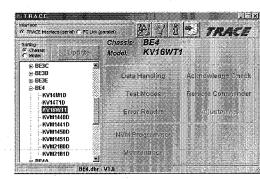

The TRACE software that is supplied with the interface allows you to:

- Read, restore and compare NVM contents via the I²C bus
- Acknowledge check of all I²C devices in the TV set
- Read Error Codes (emulation of the Error Reader tool)

With the optional IR Add-on kit, the following features can be added:

- Remote Commander emulation
- User programmable Functional Check through Infrared
- Fast and documented Test Mode setting of all Sony TV chassis

Additional features such as Adjustments and Troubleshooting are available in chassis-dependent software modules. Please contact your local Sony Service organisation for the latest information.

Note: For workshops already using the existing I^2C Link parallel port interface (9-948-320-30), this software can be used as well, replacing the TV Data Handling software (9-948-340-50), but Error Reader and IR functions can only be accessed with the TRACE interface.

Partnumbers: TRACE Starter Kit (TRACE interface + software):

9-948-320-70

TRACE Software (for users of the I²C Link interface):

9-948-340-80

TRACE IR Add-on (IR interface + Remote Commander software): 9-948-320-80

PC requirements: IBM-compatible PC with operating system Windows95, Windows98, or WindowsNT*.

* WindowsNT only supported with TRACE interface
